

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph on page 15, beginning on line 16:

**Volume:** A quantifiable measure of how much of a brand a consumer purchases/uses in a given time period. Units of measure include dollars spent and volumetric level (e.g. # of tablets, *ml* of liquid). Variables that measure volume can be calculated in 2 ways: self-reported (i.e. survey respondent estimates volume) and panel-derived (i.e. a survey respondent is a member of a tracking panel such as IRI or AC Nielsen so his/her volume can be calculated). For example, the same aggressive medicating segment should spend more dollars and/or consume more pills within the category and within brands aligned with its belief structure than a non-medicating segment.
